Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/950,026

Applicant(s)

PHAM, MANH HUNG

Examiner

Yolanda L. Wilson

Art Unit

2113

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 January 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3,5-12,14-19,21-28 and 30-32 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3,5-12,14-19,21-28 and 30-32 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

FINAL DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1,3,6-12,15-17,19,22-28,31,32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Raynham et al. (USPN 5774647A) in view of Besemer et al. (USPN 4240143). As per claims 1 and 17, Raynham et al. discloses detecting a memory error; analyzing said memory error, determining a memory module in which said error occurred and creating a log; and storing said log in said non-volatile memory section of said memory module in column 10, lines 4-18 and the abstract.

Raynham et al. fails to explicitly state wherein the log includes information identifying the cause of said error. Raynham et al. discloses that the errors are logged according to correctable and non-correctable errors.

Besemer et al. discloses this limitation in column 23, lines 42-55 and column 30, line 31 – column 31, line 13.

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have the log include information identifying the cause of said error. A person of ordinary skill in the art would have been motivated to have the log include information identifying the cause of said error because identifying the cause

Art Unit: 2113

of the error allows a user to determine during which operation performed by the memory the error occurred.

3. As per claims 3 and 19, Raynham et al. discloses wherein said memory error is detected during normal operation in the abstract.

4. As per claims 6,15,22,31, Raynham et al. discloses wherein said log comprises information about the date and time when said error occurred in the abstract.

5. As per claims 7 and 23, Raynham et al. discloses wherein said log comprises information about the system identification in column 7, lines 62-67.

6. As per claims 8 and 24, Raynham et al. discloses wherein said log is stored in a cyclical manner in column 10, lines 19-38.

7. As per claims 9 and 25, Raynham et al. discloses a central processing unit; a memory system coupled with said central processing unit comprising a plurality of memory module slots for receiving of memory modules, said memory module comprising a random access memory section and a non-volatile memory section; means for detecting an error in said memory system; means for generating a log about said error; and means for storing said log in said non-volatile memory section of a memory module in Figure 2, abstract, in column 10, lines 4-18.

Raynham et al. fails to explicitly state wherein the log includes information identifying the cause of said error. Raynham et al. discloses that the errors are logged according to correctable and non-correctable errors.

Besemer et al. discloses this limitation in column 23, lines 42-55 and column 30, line 31 – column 31, line 13.

Art Unit: 2113

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have the log include information identifying the cause of said error. A person of ordinary skill in the art would have been motivated to have the log include information identifying the cause of said error because identifying the cause of the error allows a user to determine during which operation performed by the memory the error occurred.

8. As per claims 10 and 26, Raynham et al. fails to explicitly state wherein said means for detecting an error generate an exception within said central processing unit in column 10, lines 4-18.

9. As per claims 11 and 27, Raynham et al. discloses wherein said non-volatile memory is divided in a plurality of sub sections each sub section storing one log in column 10, lines 19-31.

10. As per claims 12 and 28, Raynham et al. discloses wherein said sub sections are written in a cyclical manner in column 10, lines 19-31.

11. As per claims 16 and 32, Raynham et al. discloses wherein said log comprises information about the system identification in column 7, lines 62-67.

Claim Rejections - 35 USC § 103

12. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

13. Claims 2,5,14,18,21,30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Raynham et al. in view of Besemer et al. in further view of Brisse et al. (WO 99/05599). As per claims 2 and 18, Raynham et al. and Besemer et al. fail to explicitly state wherein said memory error is detected during a diagnostic test.

Brisse et al. discloses this limitation on pages 8 and 9, 'In another embodiment of the invention, memory errors may be detected during manufacture...This embodiment may be utilized in manufacturing test images and systems undergoing hot room testing.'

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have said memory error is detected during a diagnostic test. A person of ordinary skill in the art would have been motivated to have said memory error is detected during a diagnostic test because memory errors occur during test and are logged to indicate which memory locations have erred.

14. As per claims 5,14,21,30, Raynham et al. and Besemer fail to explicitly state wherein said log comprises information about the location of the memory module.

Brisse et al. discloses this limitation on page 7, "Once the actual slot number of the interface slot with the error is determined, then the process continues to step 310 in which the actual slot number is stored in the Windows NT™ system registry."

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have said log comprises information about the location of the memory module. A person of ordinary skill in the art would have been motivated to have said log comprises information about the location of the memory module because the slot id which indicates the location of the memory module within the system

Art Unit: 2113

is used to determine the memory module with the error. Brisse et al. discloses this on page 7, "As is known in the art, the system registry is a system database maintained by the operating system to store data such as, for example...information relating to installed hardware and software devices. In preferred embodiments, the driver 2 increments an error count in the system registry. Upon detection of an error, the driver 2 preferably reports such error and count to the well known Windows NT™ System Event Log..."

Response to Arguments

15. Applicant's arguments with respect to claims 1-3,5-12,14-19,21-28,30-32 have been considered but are moot in view of the new added limitation disclosed in the independent claims, which has been rejected using the new reference Besemer et al.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2113

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yolanda L. Wilson whose telephone number is (571) 272-3653. The examiner can normally be reached on M-F (7:30-4:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Beausoliel can be reached on (571) 272-3645. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
